Hello, my name is Bedirhan Bayraktar. I am 23 years old and I am thrilled to work in the software field. My interest in technology and computers from childhood led me to this field, and over time, I have had the opportunity to develop myself in this area.

I believe that being in the information technology sector requires high flexibility to adapt to constantly changing and evolving technologies. During this continuous change and development period, I continue to update my skills and develop myself.

To specialize in the software field, I have deep knowledge in data structures and algorithms, version control, integrated development environments (IDE), and database topics. Additionally, I am proficient in technologies such as Python, HTML, CSS, JavaScript, MySQL, and Django.

I always prioritize customer-oriented work and make efforts to complete my projects on time and within budget. I describe myself as someone who can find creative solutions to problems. In this way, I increase customer satisfaction by understanding their needs and providing the right solutions.

As someone who aims to work in large companies, I am a person with a long-term career goal. I make efforts to continuously develop myself, learn, and follow new technologies. Additionally, as a team player, I believe I can add value to my team and work collaboratively.

In conclusion, as a passionate person in the software field, I am excited to participate in new and exciting projects. I will continue to develop myself, offering innovative and quality software solutions. Thank you.
